

The 15/20 Challenge

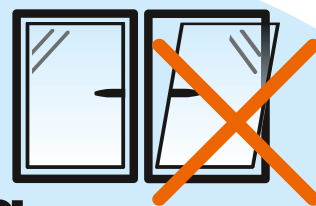

mastering energy crisis – winning the future

Save 15-20% energy

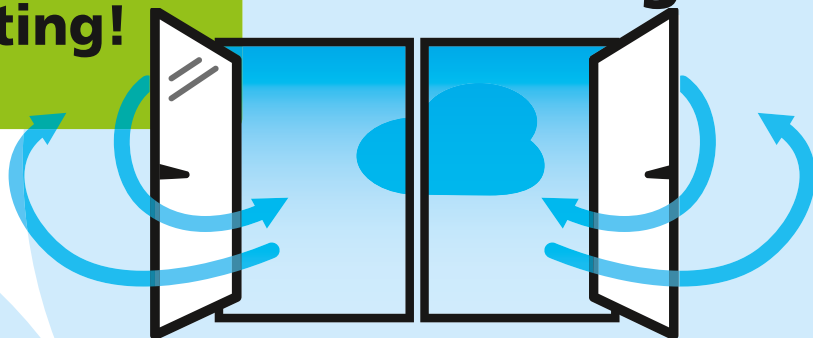

What are your ideas for saving energy?

Sign up with us klima@kreisgg.de

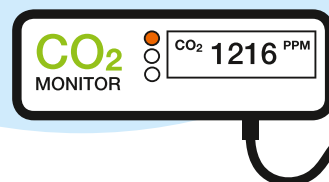

My school is participating!

Saving when airing

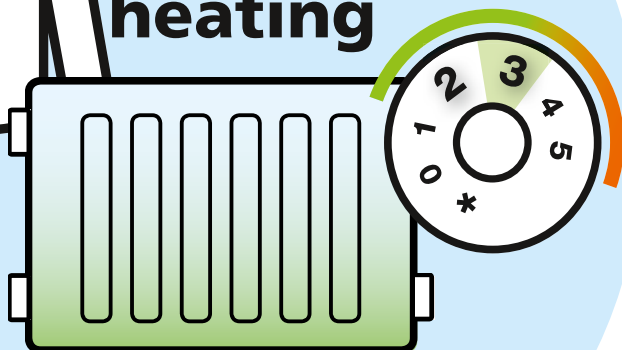

We air out as needed: depending on the size of the class, 1-2 x airing per lesson for 3-5 minutes. Target: not permanently well over 1000 ppm.

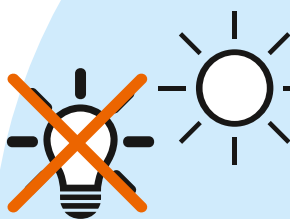

Saving when heating

approx. 19-20 degrees

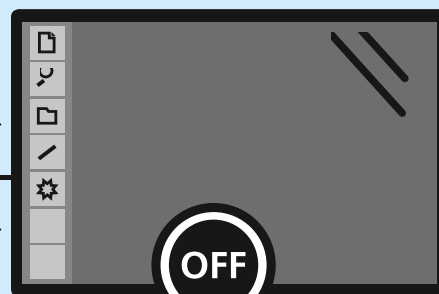

Weather appropriate clothing – we adapt.
1 degree saves 6% energy!

Saving on electricity

Lights off when it's bright enough, during breaks and after leaving the rooms.

Lessons over, Smartboard + PC + Printer + Screens – no stand by.
